

Nico's Links - App Summary

What it is

Nico's Links is a personal portfolio and utility web app for Nico Ruge, built as a client-side single-page site with route-based sections. It combines creative showcase pages with practical tools such as transit departures, travel mapping, and an X thread formatter.

Who it's for

Primary persona: Nico Ruge and visitors interested in his photography, travel activity, and personal web utilities.

What it does

- Presents a themed multi-section SPA shell (Home, Work, Projects, Other) with hash navigation and responsive sidebar.
- Shows a photography portfolio with Unsplash-backed carousels and lightbox links.
- Renders an interactive Mapbox travel map using local GeoJSON layers (trains, buses, ferry, sights) and filters.
- Provides live station lookup and departure boards via transport.rest API calls with mode filtering and refresh.
- Embeds Tumblr blog content with paging, detail view, and media lightbox.
- Includes an X Thread Viewer that builds a Reddit-style nested thread view from pasted X links.

How it works (repo evidence)

- Frontend: static HTML + Vue 3 app in index.html that mounts page components from assets/js/page_*.js.
- UI/styling: Bootstrap 5 + custom CSS in css/index.css and css/pages.css; assets in assets/icons, assets/fonts, assets/images.
- Data flow: browser fetches external APIs (transport.rest, Tumblr, X oEmbed, Traewelling) and local GeoJSON; widgets poll/update in client JS.
- Server-side helpers: Netlify Functions in netlify/functions expose Spotify status and Mapbox token endpoints used by frontend.
- State: hash route + in-memory component state; theme preference stored in localStorage.

How to run (minimal)

- Serve the repo root as a static site (example: `cd /Users/nicoruge/Documents/GitHub/NicosLinks3 && python3 -m http.server 8000`).
- Open `http://localhost:8000` and navigate sections via hash routes.
- Optional for full behavior: deploy with Netlify Functions and set env vars for Spotify and Mapbox tokens.
- Build scripts / package manager config: Not found in repo.
- Automated test setup: Not found in repo.
